## Need a complete server solution for your small business? We can help.

At Fictional Solutions, we know that small businesses struggle with big problems: protecting essential data, sharing information, enhancing productivity and stretching the IT investment. Solutions designed for big businesses don't always make sense in your environment without a large budget or dedicated IT staff.

We can help with a cost-effective, versatile server solution based on proven HP hardware and Microsoft® software, customized for your unique business environment. Microsoft Windows® Small Business Server 2008 (SBS 2008) is an affordable, integrated server solution that helps you protect business data, increase productivity and stay connected with customers. By providing many of the features used by larger companies—e-mail, internal websites, remote access, support for mobile devices, file and print sharing, antivirus and anti-spam technologies, backup and restore, and Internet connectivity—Windows SBS 2008 gives you the tools you need to improve productivity and help keep your business running smoothly.

We will work with you to deliver an integrated solution that enables you to:

- **Protect data and information** – feel more secure with built-in firewall and password protection and automatic data backup; enjoy HP ProLiant server's proven dependability; rest assured with HP Total Care award-winning 24x7 service, advice and support.
- **Do more with less** – implement e-mail, productivity and file-sharing in a single, integrated server solution; HP ProLiant ML350 G5 Servers are flexible multi-core servers designed to provide the right services at the right price; integrated management tools improve efficiency and simplify administration.
- **Connect and share information** – enhanced security on the road keeps your workforce connected where their work takes them; central data storage helps you share information and work together efficiently and effectively.
- **Get green** – reduce energy and control costs through smart provisioning of energy during every hour of operation.

Contact us today to find out more about how we can help you protect your data, increase productivity and get the most from your technology investments. We know that that technology decisions like this aren't made online—so we will come to your site at your convenience to provide a risk-free technology assessment for your business.

We look forward to working with you.

Best regards,
